RENEWABLE ENERGY

Renewable energy is energy derived from natural sources that are replenished at a higher rate than they are consumed. Sunlight and wind, for example, are such sources that are constantly being replenished.

Renewable energy sources are plentiful and all around us

Five types of renewable energy include solar energy, wind energy, hydropower, geothermal energy and biofuels.

WASTE MANAGEMENT

Waste management involves the collection, transportation, processing, and disposal of waste materials, including solid, liquid, and gaseous waste. The 5 Rs of waste management (Refuse, Reduce, Reuse, Repurpose, and Recycle) are key principles for achieving a more sustainable waste management system.

ACTIVITIES

Children learn more when they are engaged to do interesting activities.

This develops their LSRW skills. Activities will explore each child's own interest and talents. It also develops their fine motor skills.

- ☐ Our school appreciates us bringing healthy food in our tiffin...so, no to junk foods.
